Vision Vault Solutions
VVS Consultants · Audit & Taxation

FUNCTIONAL SPECIFICATION DOCUMENT · VERSION 1.1

Tax Consultancy Portal

Client portal, staff workspace and CRM for income tax returns on FBR IRIS — functional design, data flow diagrams (level 0 and 1), workflow, controls and live data, on ERPNext v16 with a React front end.

FIRM
Vision Vault Solutions, Faisalabad

SITE
consultant · ERPNext v16 + React

PARTNER
Faizan Chaudhary — Audit & Taxation

DATA AS OF
19 Oct 2026 · demo season, live entries

01 Client portal
Sign-up · OTP · documents · confirm

02 Return workflow
12 states · four-eyes · IRIS evidence

03 Tax engine & simulator
Slabs from rules · what-if scenarios

04 CRM & outreach
Leads · pipeline · WhatsApp · Lead Finder

05 Billing & accounts
Packages · proofs → invoice + payment

06 Insights & control
Dashboards · reports · roles · audit

Prepared by MicroMax Erp Pvt Ltd · Office P.442/D, Mezzanine Floor, Adjacent to Unze London, Hurrian Wala Chowk, Faisalabad 38000

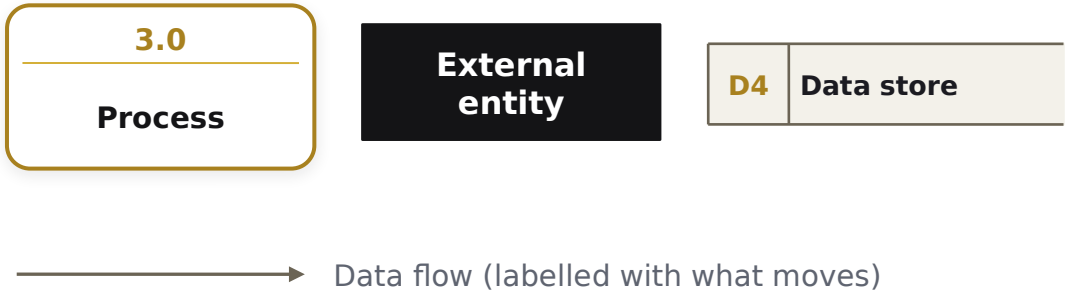

About this document

Scope, audience and how the specification is organised

Document information

Item	Detail
Document	Functional Specification — VVS Tax Portal
Version / date	1.1 · 19 Oct 2026
System	ERPNext v16 · Frappe CRM · WhatsApp · React
Audience	Partner, admin, consultants, implementers
Data source	Live records, site 'consultant' (fake clients)

Notation used in the diagrams

Contents

1 System at a glance
2 Actors & roles
3 DFD level 0 — context
4 DFD level 1 — processes
5 Two ways to file · workflow
6 Onboarding & verification codes
7 CRM & lead generation
8 Documents · tax · simulator
9 Controls · billing · insights
10 Security · next steps

Principles the design follows

- Rates never live in code — slabs, credits and final-tax rates come from rule records
- Nothing is shown as filed without an IRIS acknowledgment and receipt
- Four-eyes: whoever prepares a return cannot approve it
- Calculators and simulators are labelled as estimates

SYSTEM AT A GLANCE

Live volumes on site 'consultant'

Record counts on 19 Oct 2026: a demo filing season (TY2026) walked through the real workflow by the team and the clients

56
Clients
Taxpayers with masked identifiers

55
Tax Returns
13 filed · 41 in progress

398
Tax Documents
Checklist items, private files

790
Audit Events
Every create / move / approve

48
Engagements
Packages sold this season

30
Sales Invoices
Posted from verified proofs

43
Site Visits
Field prospects

55
CRM Leads
Website, WhatsApp, visits, finder

Record	Count	Record	Count	Record	Count	Record	Count
Generated PDFs	**19**	Payment Entries	**30**	WhatsApp Messages	**44**	Document Types	**18**
Tax Calculations	**48**	Consultations	**13**	WhatsApp Templates	**4**	Tax Years	**2**
Scenarios	**5**	CRM Deals	**9**	Services	**6**	Slab Settings	**8**
Payment Proofs	**35**	Lead Prospects	**15**	Packages	**4**	Staff users	**13**

Who uses the system — and whose records they see

Role decides what kind of access; scope decides which records (enforced on the server for every list and document)

Tax Admin
1 user

Runs the firm: settings, team, payments, every client and return.

All clients

Tax Consultant
2 users

Prepares returns for the clients assigned to them.

Assigned clients

Tax Reviewer
1 user

Checks prepared returns and sends them back or on for approval.

All clients

Tax Approver
1 user

Gives the final approval before filing (never their own work).

All clients

Filing Officer
1 user

Files approved returns on FBR IRIS and records the acknowledgment.

All clients

Field Officer
1 user

Registers prospects and clients met in the field.

Own registrations

Data Entry
1 user

Only enters what the client told us and records the client's approval (every team member can also do this).

All clients

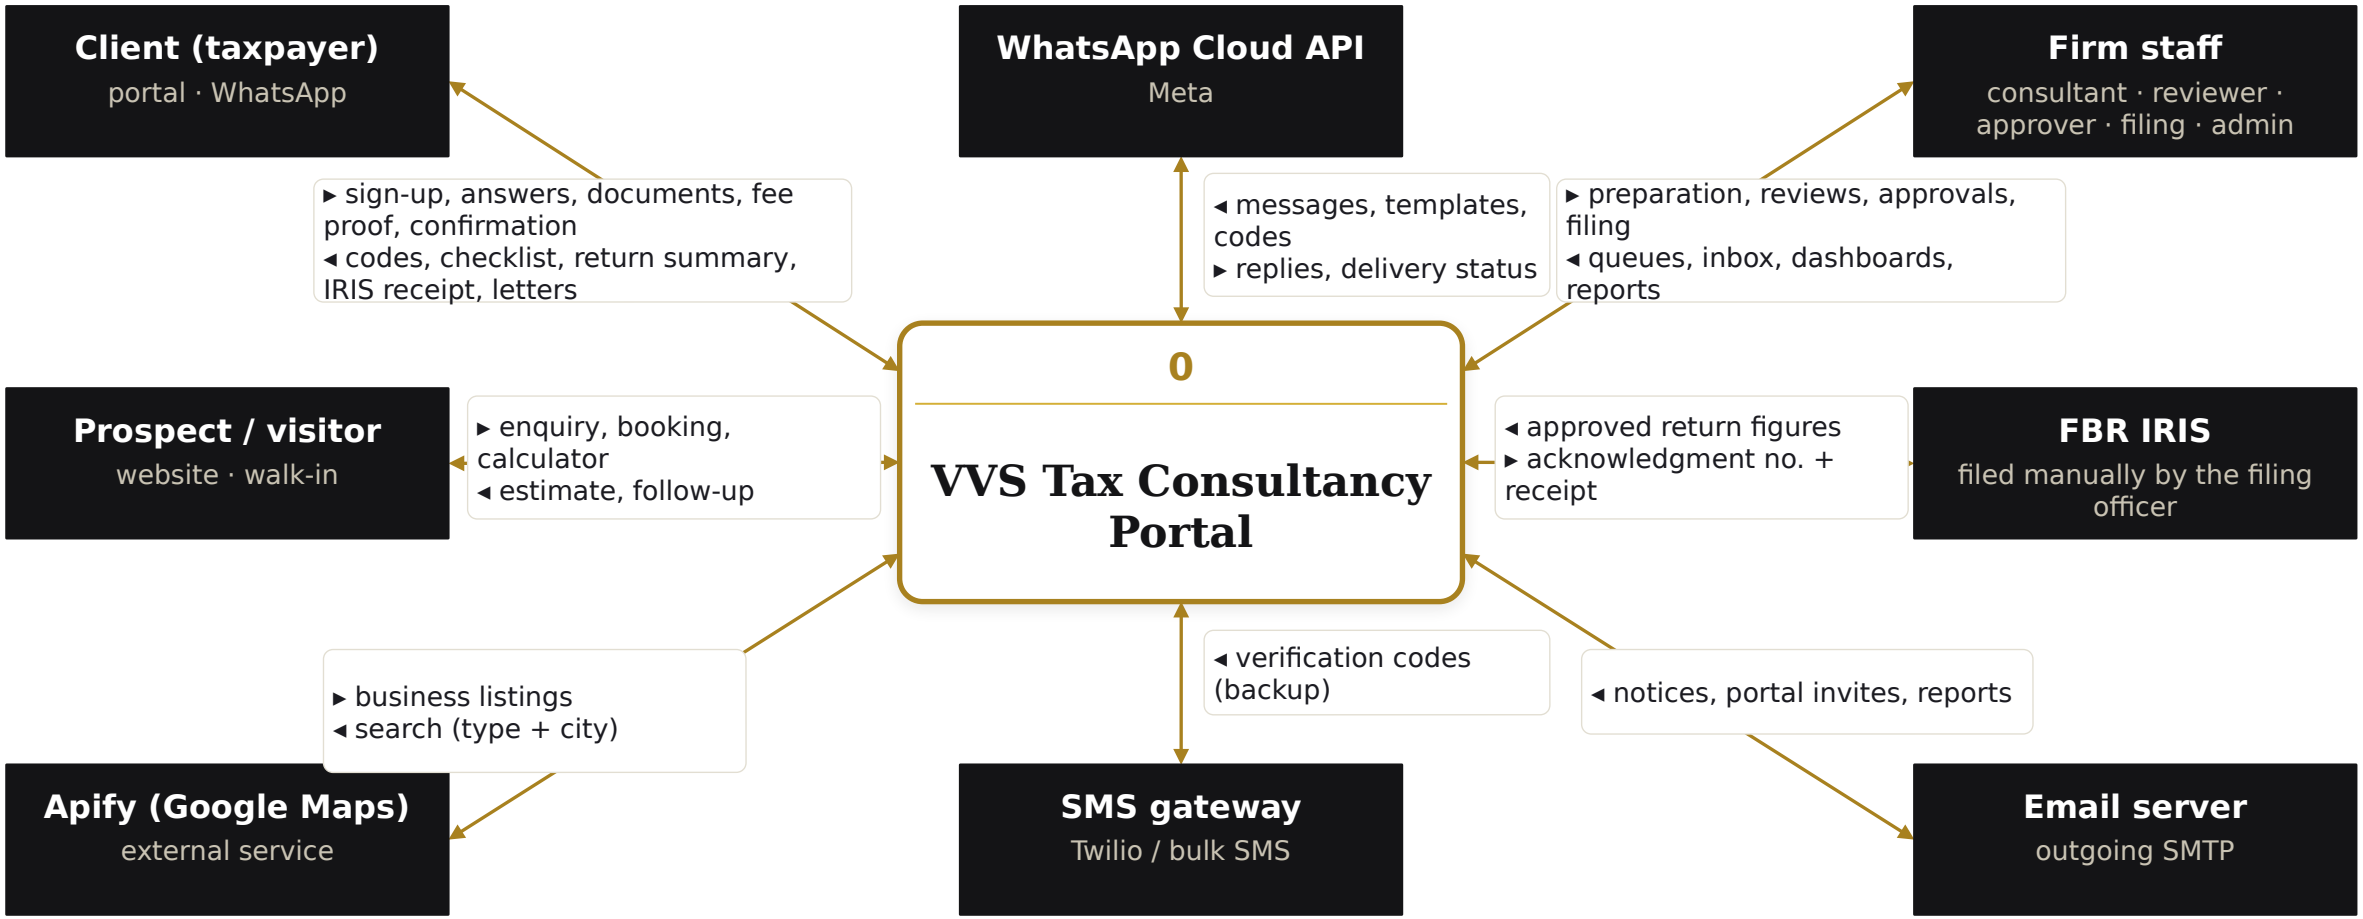

Client
51 portal logins

A taxpayer using the client portal.

Own records only

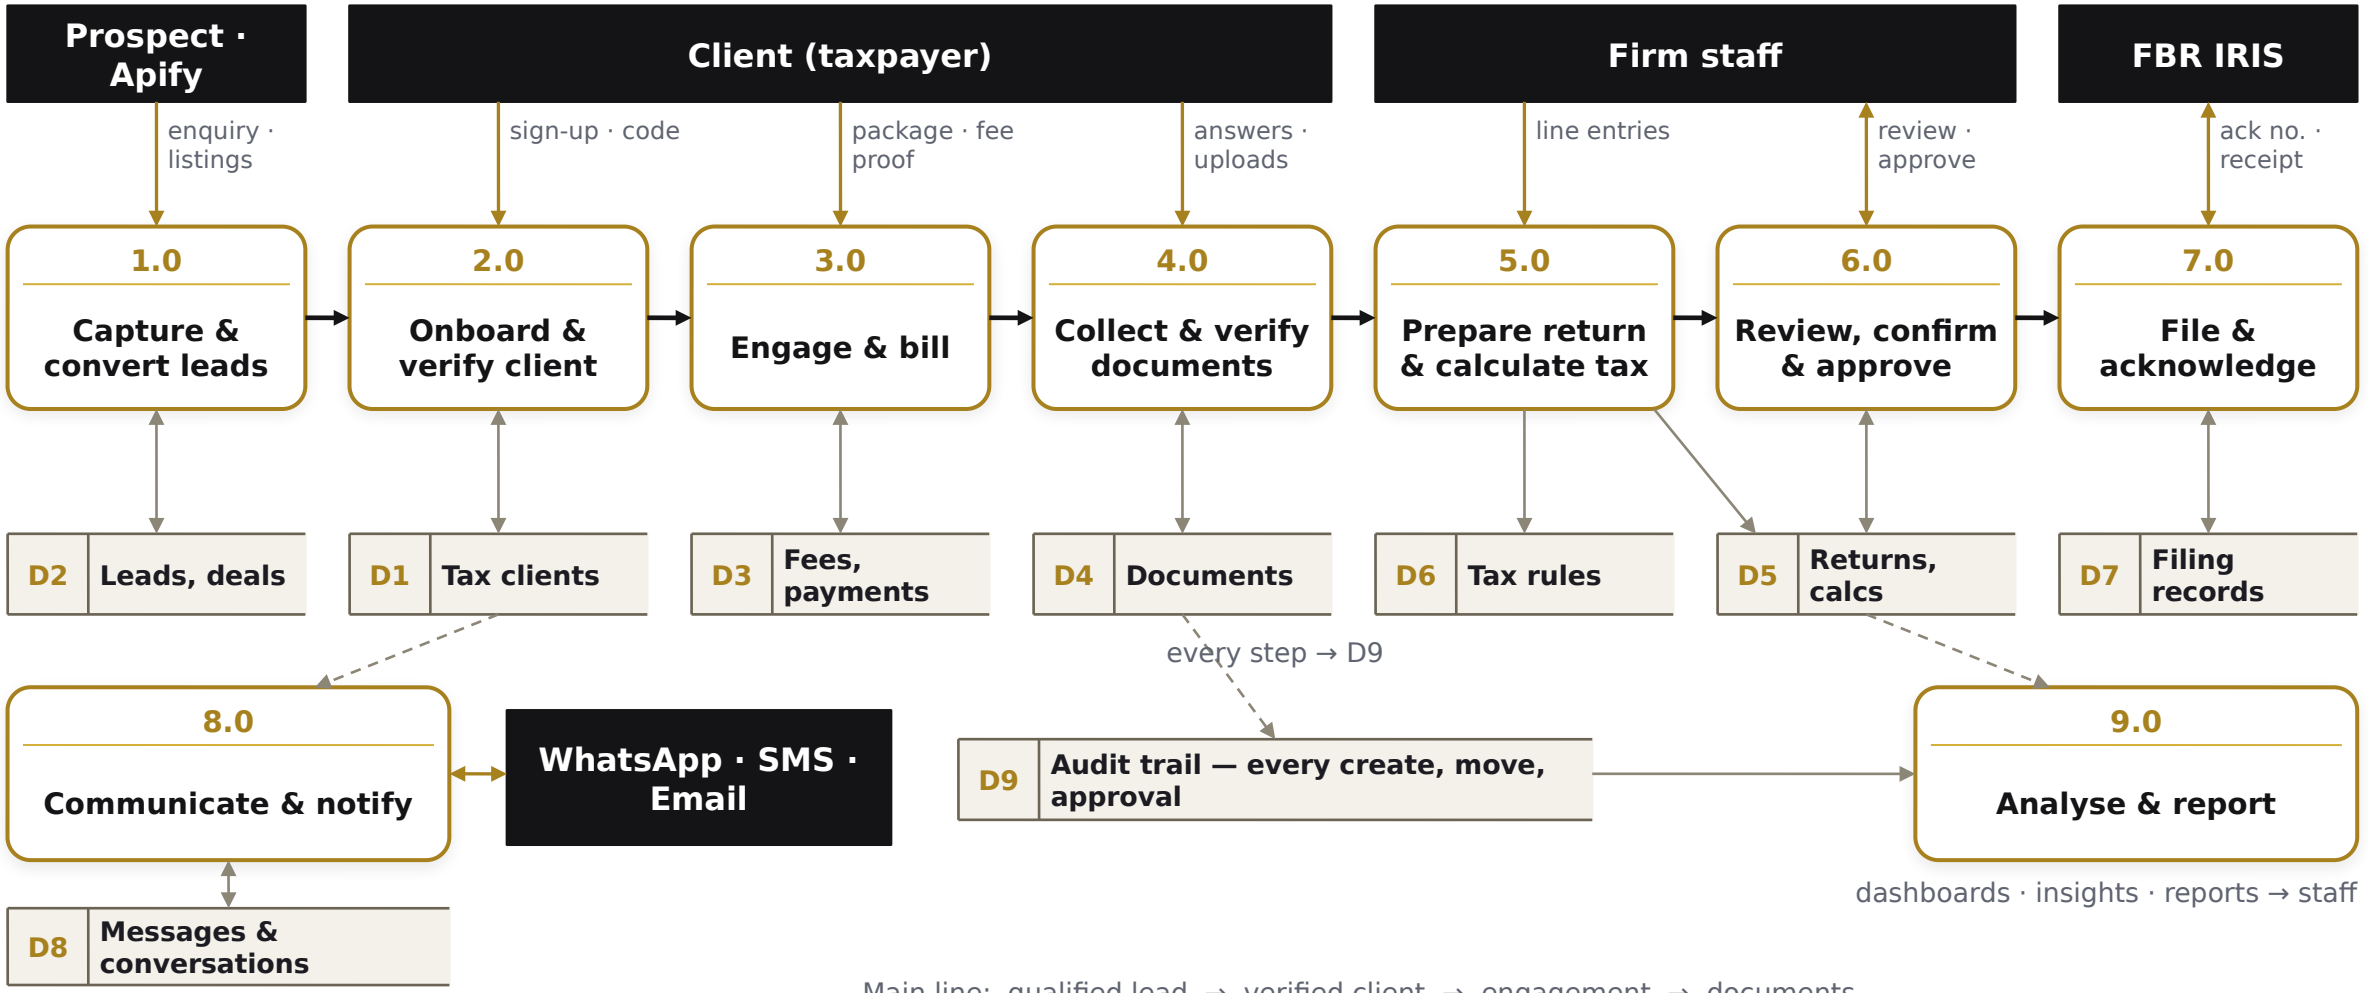

The portal and everything it exchanges data with

One process (the whole system), eight external entities and the data flowing between them

▸ into the portal ◂ out of the portal

Inside the portal: nine processes, eight data stores

Main line: qualified lead → verified client → engagement → documents verified → calculated return → approved return

SECTION 2

Functional modules

From first contact to the IRIS acknowledgment: the client journey, the 12-state return workflow and each module that supports it.

CLIENT JOURNEY

Seven steps the client sees in the portal

Every step is dated from the audit trail and shown as a progress tracker to the client and to staff

1 Account

Sign up, verify mobile with a 6-digit code (WhatsApp first, SMS backup)

2 Documents

Answer 10 questions → personalised checklist; upload from the phone

3 In preparation

Consultant verifies documents, enters lines, calculates tax

4 In review

A second person reviews against a checklist

5 Confirmation

Client checks the summary and confirms (or asks a question)

6 Filed

Approver signs off; filing officer files on FBR IRIS

7 Acknowledged

IRIS acknowledgment no. + receipt in the client's vault

Where the TY2026 demo season stands

54	43	36	30	27	25	20	16	13
Documents Pending	Draft	Pending Review	Under Review	Reviewed	Client confirm	Approved	Submitted	Acknowledged

Returns that have reached each step (cumulative)

TWO WAYS TO FILE

We file for the client — or the client files online

Both routes feed the same controlled pipeline: review, client confirmation, four-eyes approval and the IRIS acknowledgment

Team-assisted

We file on the client's behalf

Video 1

Phone · WhatsApp · Email · Office visit

1. Front desk registers the client and opens the return
2. Client sends documents on WhatsApp — attached straight from the chat
3. Data entry records what the client told us and answers the questionnaire
4. Consultant verifies documents, prepares the return, calculates tax
5. Client approves the summary by phone — staff record method, note and proof

Self-service

The client files from the website

Video 2

Website · Mobile · 24 / 7

1. Visits the website → Start Filing → login verified with a 6-digit code
2. Chooses a package and answers simple Yes / No questions
3. Describes her year in everyday words and uploads her documents
4. Pays the fee (Bank, Raast, JazzCash, Easypaisa) with a screenshot
5. Reads the summary and clicks “Confirm my return” in the portal

SAME PIPELINE for both routes

Review checklist → Client confirmation → Four-eyes approval → File on FBR IRIS → Acknowledgment in vault

Data entry on the client's behalf — with a trail

Every team member can act for a client within their record scope; the Data Entry Officer role does only this

What the client told us

- “Enter for client” form: salary, bank, property, vehicle, cash, household
- Questionnaire answered for the client — rebuilds the document checklist
- Shows “Entered for the client by …”; figures change only when the consultant copies it in

Documents from WhatsApp

- “From WhatsApp” lists the files that client sent — no download, no re-upload
- Only that client's files; PDF, JPG or PNG; type and size checked
- Badge on each document: via WhatsApp, Email, In person, Courier or client upload

Client approval recorded

- For clients who approve by phone, WhatsApp, in person, email or signed letter
- Method + note (who, when, what was agreed) + optional proof
- Comment on the return and a notice to the approver

Controls

Four eyes

Whoever records the client's approval cannot approve the return

Separation

Data entry uploads documents; a consultant or reviewer verifies them

Time window

Client data editable until Submitted to FBR; later changes are flagged to consultant and reviewer

Audit

Every entry, upload and approval: who, when, how — in the audit trail

12 states, 17 moves — a rule checked on each

Frappe Workflow checks the role; the portal's rules check the business conditions before any state change

From	Action	To	Who may act	Rule checked
Documents Pending	**Documents Complete**	Draft	Consultant, Admin	All required documents verified; fee policy
Draft	**Submit for Review**	Pending Review	Consultant, Admin	Income lines, final-tax rates, current calculation
Pending Review	**Start Review**	Under Review	Reviewer, Admin	—
Under Review	**Request Changes**	Changes Required	Reviewer, Admin	Comment required
Changes Required	**Resume Preparation**	Draft	Consultant, Admin	—
Under Review	**Mark Reviewed**	Reviewed	Reviewer, Admin	Tax Review saved with checklist
Reviewed	**Send to Client**	Awaiting Client	Reviewer, Admin	—
Awaiting Client	**Client Question**	Changes Required	Client	—
Awaiting Client	**Approve**	Approved	Approver, Admin	Client confirmed (portal or staff); four-eyes
Approved	**Mark Submitted on IRIS**	Submitted	Filing Officer, Admin	Approved and unchanged since approval
Submitted	**Record Acknowledgment**	Acknowledged	Filing Officer, Admin	IRIS ack no. + FBR receipt attached
Submitted	**Report Filing Error**	Filing Error	Filing Officer, Admin	Error notes required
Filing Error	**Retry Filing**	Submitted	Filing Officer, Admin	—
Acknowledged	**Close**	Closed	Admin	—
Reviewed	**Reopen for Review**	Pending Review	Consultant, Admin, Reviewer, Approver	Reason required; approval cancelled

Reopen for Review is also allowed from Awaiting Client and Approved. Any change to signed-off figures cancels the approval automatically; a filed return can only be revised, never edited.

A 6-digit code: WhatsApp first, SMS as backup

The code is generated, stored only as a hash, and delivered by the channel order set in Settings → Verification codes

Client enters mobile → **Code generated · hashed** → **WhatsApp authentication template** → **If it fails: same code by SMS** → **Client types code · verified** → **Account + client record created**

Rules

- Code expires after 10 minutes; 5 attempts; 5 codes per number per hour
- Only a hash is stored — never the code; WhatsApp codes bypass the team inbox and API log
- Channel recorded on each request: WhatsApp, SMS or Failed
- "No WhatsApp? Send the code by SMS instead" on the code screen
- A mobile that already has an account is sent to sign in

Settings → Verification codes

Setting	Options
Send codes by	WhatsApp, then SMS (default) · SMS only · WhatsApp only
WhatsApp template	Meta Authentication template, e.g. vvs_verification_code
SMS provider	Console (development) · Twilio · HTTP gateway (PK bulk SMS)
Secrets	Auth token / API key stored encrypted, write-only
Test	Send 000000 to own mobile, WhatsApp-first or SMS only

From enquiry to engaged client in one pipeline

Frappe CRM inside the portal: leads, a tax pipeline, activities, Lead Finder and WhatsApp broadcasts

Moving a deal to Engaged creates the Tax Client (with its site-visit details) — no re-typing

Lead capture

55 leads

Website contact & booking, WhatsApp first message, site visits, walk-ins, Lead Finder — one lead per person (duplicate check on mobile / email).

Activities

Notes · tasks · calendar

Lead page: rich notes, follow-up tasks, calendar meetings, WhatsApp (free text or approved template), email from templates.

Lead Finder

15 prospects

Google Maps by business type + city through Apify, or public websites; every result reviewed before it becomes a lead.

WhatsApp broadcast

4 templates

One approved template to clients or leads; consent and STOP opt-outs respected; insights per campaign.

The right documents, checked once, kept private

Questionnaire answers and the chosen service build each return's checklist; generated letters land in the same vault

Checklist rules

- 10 yes/no questions (salary, business, rent, capital gains, bank profit, property, vehicle …)
- 18 document types, each with a client hint
- Requirement rules by client type, taxpayer type, service, year, answer
- A planning scenario can add evidence (e.g. Zakat certificate) with the reason shown to the client

Statuses

Requested · Pending · Verified · Rejected

Upload → staff verify / reject (with reason) → all required verified → return moves to Draft

Generated documents · 19 issued

Document	From	Purpose
Authority Letter	Client	Lets the firm file on IRIS for the client
Engagement Letter	Engagement	Scope, fee and what is needed
Document Checklist	Return	Every document, with what is missing
Tax Computation Summary	Return	Income, tax, refund or payable on one page
Wealth Statement Summary	Return	Assets, liabilities and net wealth
Withholding Certificate Request	Return	Ready letter to employer or bank
Filing Confirmation	Return	Only after the IRIS acknowledgment
Tax Planning Report	Scenario	What-if vs this year and last year

Jinja print formats on the firm letterhead, rendered to PDF, versioned (v1, v2 …) and stored privately; clients download them from their vault.

How a return's tax is calculated

Worked example: TAX-RET-2026-00006 · Usman Ghani (test) · TY2026 · Salaried Individual · demo rates

+	Total income	Rs 3,117,000
−	Deductible allowances	Rs 31,250
=	**Taxable income (normal)**	**Rs 2,968,750**
+	Tax on taxable income (slab)	Rs 292,812.5
+	Final / separate-block tax	Rs 17,550
−	Tax credits	Rs 4,930
=	**Tax liability**	**Rs 305,432.5**
−	Tax withheld / advance tax	Rs 258,550
=	**Payable**	**Rs 46,882.5**

Slab table · Salaried Individual · TY2026

Taxable income from	to	Fixed	Rate
Rs 0	Rs 600,000	Rs 0	0%
Rs 600,000	Rs 1,200,000	Rs 0	1%
Rs 1,200,000	Rs 2,200,000	Rs 6,000	11%
Rs 2,200,000	**Rs 3,200,000**	**Rs 116,000**	**23%**
Rs 3,200,000	Rs 4,100,000	Rs 346,000	30%
Rs 4,100,000	and above	Rs 616,000	35%

Highlighted slab applies: Rs 116,000 + 23% of the amount above Rs 2,200,000. Separate-block income (bank profit) is taxed at the rate entered on its line; credits reduce normal tax only.

Slabs, credit rules and tax years are records — the firm updates them each Finance Act, no code change. Demo rates must be validated before live use.

Plan first, then apply the final scenario

Same engine and rates as the return; nothing changes the return until a consultant applies a scenario

1 Move levers

Income per group, add-backs, allowances, credits, tax paid — sliders and amounts

2 Compare

Last year's filed return · this year's actual · simulated — table and chart

3 Save scenarios

Name + client notes; compare up to 3; lowest tax marked

4 PDF report

Tax Planning Report PDF into the client's vault

5 Apply

Preview line changes → write lines → recalculate → request evidence

Safeguards when a scenario is applied

Only while preparing

Documents Pending, Draft or Changes Required

One at a time

Undo the applied scenario before another

Evidence required

New deductions / credits add required documents — Submit for Review blocked until verified

Undo

Restores every line exactly and recalculates

Built-in controls that protect client and firm

Each control is enforced on the server when the state changes — not only hidden in the screen

Four-eyes approval

The preparer can never approve; approval needs the client's confirmation first.

Content hash

Approval stores a hash of the figures; any change cancels it and reopens review.

Review checklist

Mark Reviewed needs a saved Tax Review with every checklist item answered.

IRIS evidence

Acknowledged only with the IRIS number and the FBR receipt attached.

Filed is final

A filed return cannot change — a revised return is created instead.

Audit trail

790 events: who moved what, from which state, when.

Packages, fee proofs and the ERPNext postings

This season: Rs 554,000 billed · Rs 330,500 collected · Rs 223,500 outstanding

Package chosen
Client orders in the portal (promo codes optional)

Engagement
Fee, discount, payment status

Payment proof

Client data stays private by design

Identifiers masked

CNIC shown as *****-*******-1; NTN and bank details never sent by WhatsApp or in templates.

Private files

Documents and generated PDFs are private files, streamed only after a permission check.

Record-level isolation

Every list and document is filtered by scope: all / assigned / own registrations / own portal.

Secrets write-only

Tokens and API keys stored encrypted; the browser only learns whether one is set.

Codes hashed

Verification codes stored as hashes, rate-limited, never logged in readable form.

Consent

Privacy consent at sign-up; WhatsApp only with opt-in; STOP honoured in broadcasts.

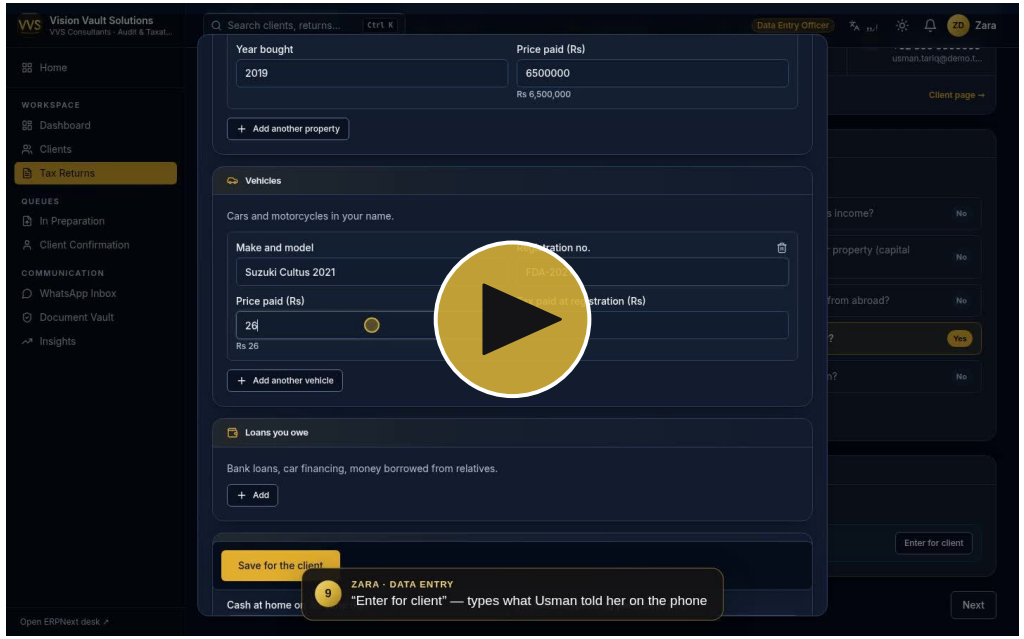

External services: live today, and what waits

Configured in Setup → Settings by the Tax Admin; secrets are stored encrypted

Integration	Used for	Status on this site	Needed to go live
WhatsApp Cloud API (Meta)	Inbox, templates, broadcasts, codes	**Test mode — nothing leaves the server**	Meta app, phone ID, token, approved templates
SMS gateway	Verification-code backup	**Console (development)**	Twilio or PK bulk-SMS link + PTA sender ID
Outgoing email	Notices, invites, direct email	**Not set up**	SMTP account (Settings → Email)
Apify (Google Maps)	Lead Finder searches	**Live — token saved**	—
Payment gateway	Online fee payment	**Manual proofs only**	Choose JazzCash / Easypaisa / Safepay
FBR IRIS	Return filing	**Manual by filing officer**	No official API — evidence attached by hand
ERPNext Accounts	Invoices and payment entries	**Live**	—

See both routes end to end

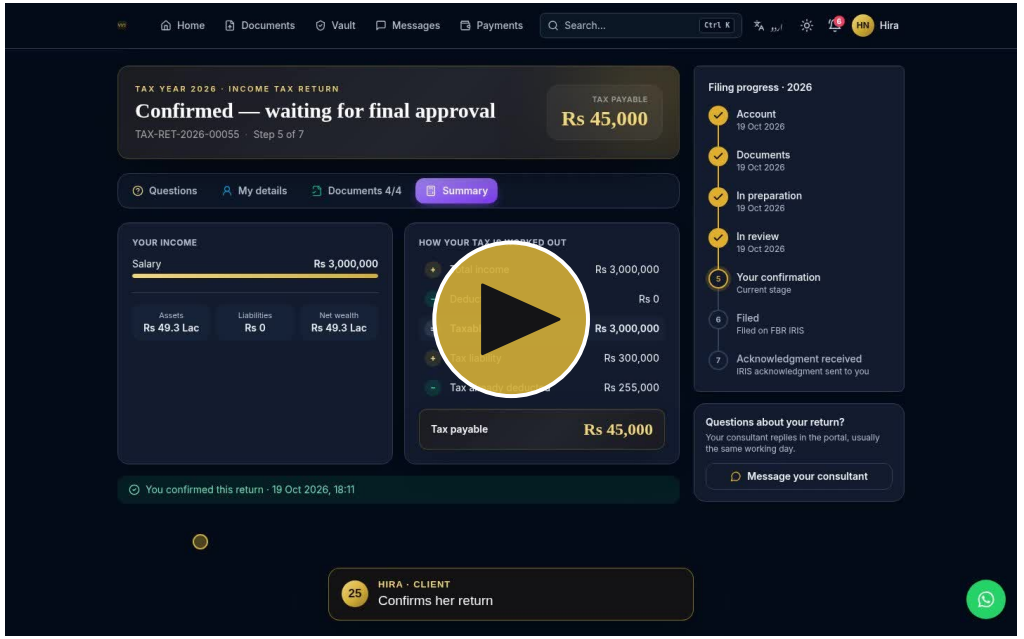

Recorded on the demo site with fictitious clients — every screen, entry and approval is the real system

Video 1 · Team-assisted filing

VVS_Tax_Return_Full_Process.mp4 · 4 min 32 s

Walk-in client Usman Tariq. Admin registers him; documents arrive on WhatsApp; Zara (Data Entry) enters what he said and attaches the files; consultant prepares; reviewer checks; Zara records his phone approval; approver signs off; filing officer records the IRIS acknowledgment.

Video 2 · Client journey from the website

VVS_Client_Journey_Website_to_Filed.mp4 · 4 min 40 s

Hira Naveed finds the website, requests a login with a 6-digit code, enters her own details and documents, pays by JazzCash; the team verifies and prepares; she confirms in the portal; the return is filed and acknowledged.

NEXT STEPS

Decisions needed to go live

1 Validate tax rates

Slabs and credit rules are demo values — confirm against the Finance Act

2 Connect messaging

Meta WhatsApp account + authentication template; SMS provider

3 Set up email

Outgoing SMTP for notices and invites

4 Confirm prices

Express Filing Rs 10,000 shown vs Rs 12,000 discussed

5 Firm payment details

Bank / Raast / wallet titles for the How to pay box

6 Targets (SLAs)

Days allowed per step for the late flags
