VISION VAULT SOLUTIONS · ADMIN GUIDE

Import clients and past returns from Excel

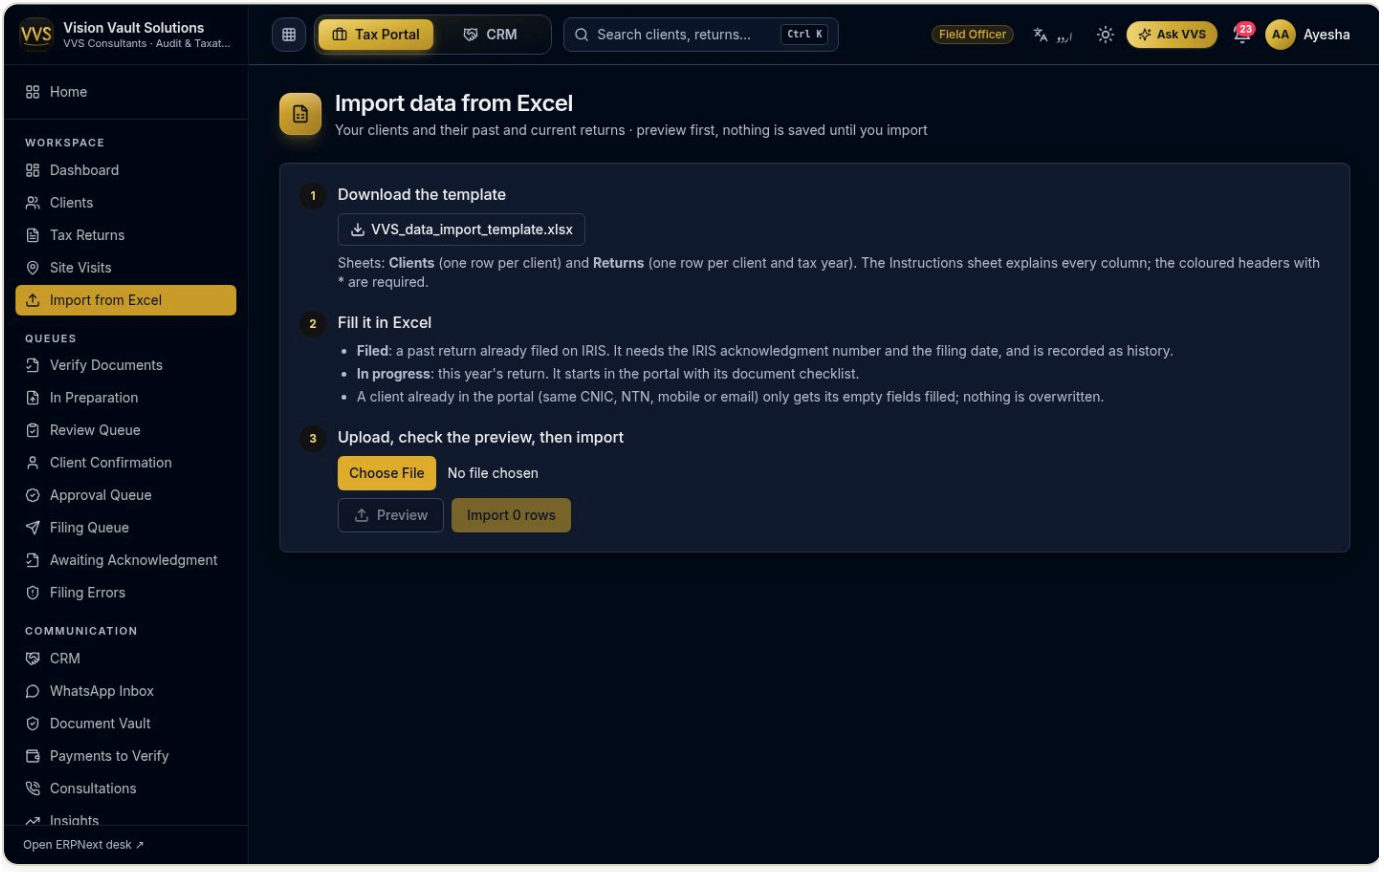

Bring the firm's existing clients and their returns into the portal in one go: download the template, fill it in Excel, preview, then import.

1 · Template	2 · Clients	3 · Returns	4 · Preview	5 · Import
Download .xlsx	One row each	Filed / In progress	Nothing saved	Valid rows

Who: **Tax Admin** · **Tax Consultant**

1 The template

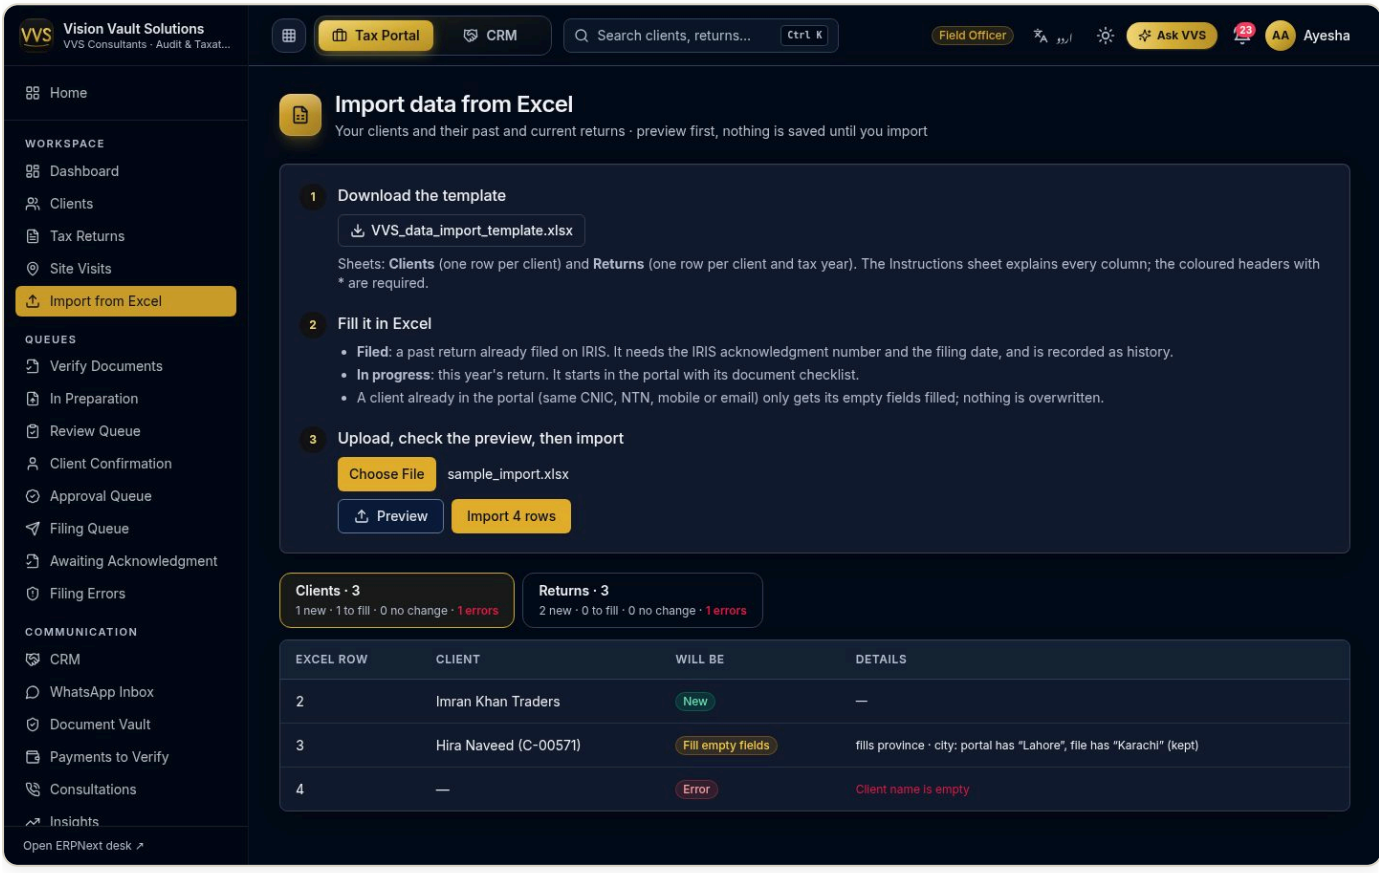

1. **Import from Excel** → **Download the template**.
2. **Clients** sheet: one row per client; only the name and type are required.
3. **Returns** sheet: one row per client and tax year. **Filed** = a past return (needs the IRIS acknowledgment number and filing date). **In progress** = this year's work.
4. CNIC, NTN and mobile are text columns, so Excel keeps the leading zeros.

Import from Excel: the three steps.

2 Preview, then import

1. Choose the filled file and press **Preview**: every row shows *New*, *Fill empty fields*, *No change* or *Error* with the reason.
2. A client already in the portal only gets its empty fields filled; a value that differs is reported and kept.
3. Press **Import**. Fix the rows in error and import the same file again; rows already imported show *No change*.

The preview of a sample file.

Screens in this guide are from the VVS tax portal with demo data (November 2026). Tax figures shown are estimates from demo slab rates.
